

Quality Engineering Services

Testing Services for Right-the-First-Time Releases

Leveraging our ISO9001 certified processes, methodologies, and automated testing approach, we help our customers achieve successful product launches, the first time.

OFFERING

BioSoft Integrators' Quality Engineering Services encompass the Software Testing Life Cycle, Test Consulting and Test Advisory Services, Test Implementation, Automated Test Development and Execution, Managed Testing Services including Test Environment Management and Test Data Management.

Using diverse technology platforms and with more than three decades of software experience, BioSoft Integrators addresses the customer needs by implementing manual and automated testing approaches.

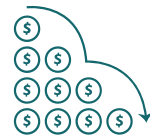

Benefits of Working with BioSoft Integrators

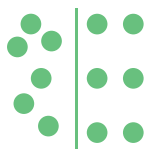

Software Experience with Scientific Expertise

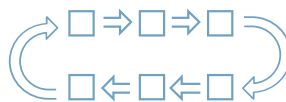

Third Party Testing offers Unbiased verification of developed software

Near Shore Testing Services Reduces costs

Development, Documentation & Testing expertise in Regulated and Non-regulated applications

Can execute according to Client's SDLC or Our Own

ISO9001 Certification

As a company, **we develop software** which enables our team to grasp the concepts, technology and rigors required in offering Quality Engineering Services.

Our approach of modern and adaptable testing tools expedites development and deployment and identifies what areas of your project are in need of further tuning.

Examples of What We Can Test

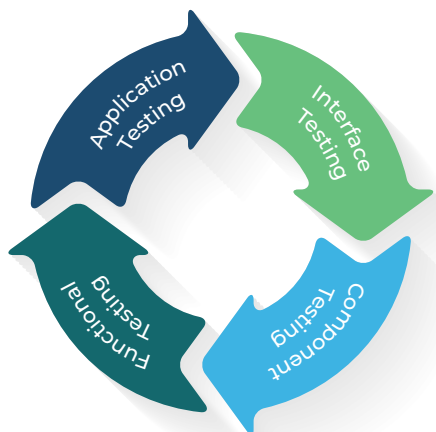

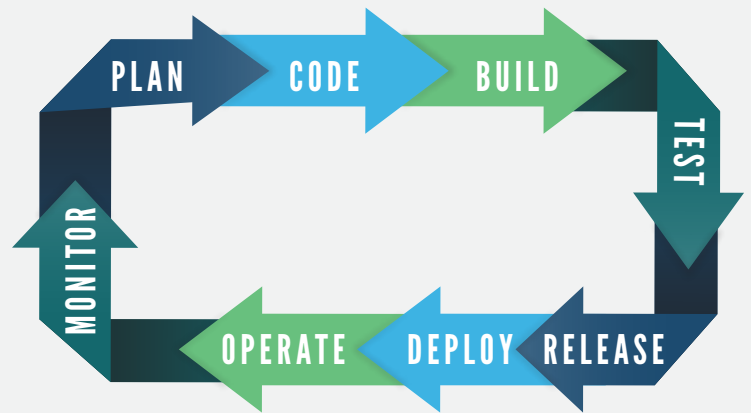

- ☑ User Interfaces
- ☑ Verification of User Guides, Service Manuals, Quick Steps
- ☑ Instrument Communication Drivers
- ☑ Analysis Algorithms and Calculations
- ☑ Integration Testing
- ☑ System Security
- ☑ Blackbox/Whitebox Testing
- ☑ Sample Traceability
- ☑ End-to-End Testing involving multiple intermediate steps
- ☑ Customer Portals

Why BioSoft Integrators Testing Services?

We have a Quality Engineering Team highly prepared to identify the needs of each project, using processes to save time and money.

Agile Testing

To achieve speed and agility, it is important to automate all the testing processes and configure them to run automatically.

DevOps Testing

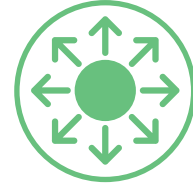

Our Quality Engineers provide continuous corrective feedback to the development team, while development is ongoing, ensuring iterative releases of tested product.

Benefits of Automated Testing

The introduction of automation to the quality assurance process helps organizations enhance performance.

COMPREHENSIVE

Automated testing can check details that would be cost prohibitive to test manually.

LARGE DATA SETS

Using automation allows for large numbers of test case variations to be inspected, without sacrificing time. Types of interactions to automate: multiple operating systems, browsers, connection speeds, user behavior scenarios, etc.

24/7

Automated tests can be executed without manual labor and can run 24 hours/day, 7 days a week.

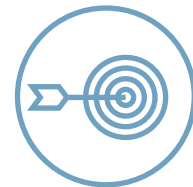

BUGS

The possibility to quickly spot a bug during development cycles help reduce expenses and working hours to fix them.

HIGH PRECISION

An automated testing approach is precise and less subject to human error. Our qualified Quality Engineers design automated test scripts to fit the verification goals.

Automated Testing We Can Do

Performance Testing

Database Testing

Regression Testing

Functional Testing

Security Testing
